

Bug Report showcase

First of all, thank you dearly for all the great work you have put into this. This document attempts to showcase some unintended behavior I have seen in Chronos.

When sequence lines in Chronos have long comments, instead of wrapping; lines go past the page. The following is an example of the unintended behavior

```
#chronos.diagram({  
  import chronos: *;  
  _par("A")  
  _par("B")  
  
  _seq("A", "B", comment: lorem(10))  
  _seq("B", "B", comment: lorem(10))  
})
```
